

SMB CloudTech

IT CONSULTING FOR
**HEALTHCARE
PRACTITIONERS**

Do you want to protect confidential PHI while enhancing your own productivity with the right EHR technology?

Taking care of your patients means a lot more than keeping them physically healthy these days. In today's modern healthcare environment, you also have a responsibility to guard the privacy of their electronic protected health information.

SMB CloudTech offers IT services for healthcare practitioners like you, designed to enhance security, ensure compliance with regulations, and make it easier for you and your staff to get work done.

Get focused on taking care of your patients – we provide the right IT services that allow you to:

Protect the PHI of your patients

with comprehensive security, including encryption, user authentication, password protection, malware protection, and much more.

Maintain compliance with HIPAA

through regular, comprehensive security audits and risk assessments designed to help you better adhere to requirements.

Create policies on data access and storage

to help your staff members avoid accidental data breach resulting from errors or lack of proper security measures.

Plan for adoption and optimization of EHR and EMR technology

to help your organization qualify for financial rewards from Stage 2 of Meaningful Use.

Depend on business continuity planning

that keeps your data and applications safe and backed up, onsite and in the cloud, so you're always able to keep working.

Discover what makes SMB CloudTech the top IT services company for healthcare practitioners.
